

# Data Types

Data Type	Description	JSON Schema Type	Examples
Integer	A positive or negative whole number (i.e., a number that can be written without a fractional part).	integer	3, 19, -4
Numeric	A number that may include a fractional part with optional leading sign and optional exponent (engineering notation).	number	3.43, 0, -4, 1.03e4
Boolean	True or false.	boolean	true, false
String	A sequence of characters of any length using any (specified) character set.	string	Indirect evaporative cooler
ID	A referencable identification for a data group and sequence of characters of any length using any (specified) character set.	string	AHU-01
Null	Indicator that no value is provided. Only used in combination with other data types, e.g., 'Number/Null'.	null	null

# OutputFormatType

LABORATORY	Laboratory	
KITCHEN	Kitchen	
OTHER	Other	

# InfiltrationMethodType

Enumerator	Description	Notes
WEATHER_DRIVEN	Weather Driven. The amount of air leakage is determined by using the infiltration_flow_rate with a correlation usually involving windspeed, height, and the difference between indoor and outdoor temperature and is then multiplied by the schedule.	
PRESSURE_BASED	Pressure Based. The amount of air leakage is determined by induced airflows from pressure differences between zones, air distribution system components, the outside due to wind speed and direction.	
CONSTANT	Constant. The schedule is ignored.	
CONSTANT_SCHEDULED	Constant multiplied by the schedule.	
OTHER	Other infiltration methods.	

# SurfaceClassificationType

Enumerator	Description	Notes
WALL	Vertical or nearly vertical wall	
FLOOR	Floor	
CEILING	Ceiling	

# SurfaceAdjacentTo

Enumerator	Description	Notes
EXTERIOR	Exterior wall or roof which is adjacent to the exterior environment.	
GROUND	Slab-on-grad or below grade surface if adjacent to ground.	
INTERIOR	Interior surface if adjacent to another space which is explicity modeled.	
IDENTICAL	Surface adjacent to a environment identical to the space. Sometimes this is described as adiabatic surface since no heat is transfered. The space on the other side of the surface is not explicity modeled.	
UNDEFINED	The surface adjacency cannot be determined by the software.	

# SurfaceConstructionInputOptions

Enumerator	Description	Notes
LAYERS	Construction is entered layer-by-layer.

# Output

Name	Description	Data Type	Units	Range	Req	Notes	RMR Test	AppG Used By TCDs	AppG P_RMR Equals U_RMR	AppG B_RMR Equals P_RMR
output_descriptor	Ruleset specific descriptor of output from simulation program or postprocessed results	((<CommonOutputDescriptors>, <OutputDescriptors2019ASHRAE901>)			✓	The output required for a ruleset is determined by the list of output descriptors for that ruleset. Units are described at the end of each output descriptor preceded by an underscore or the term UNITLESS.	unknown	unknown	unknown	unknown
data_group_reference	Optional reference to a data group that is related to the output	\$ID				Typically unused for overall results or references zone, fluidloop, or HVAC data group for outputs that are related to those specific components. For example, annual lighting energy consumption for a specific zone would reference the specific zone.	unknown	unknown	unknown	unknown
values	The actual values of the output corresponding to the output descriptor	[Numeric]	W			Typically a single output value is listed but for some descriptors a series of output values may be appropriate. If a list of values is required the term LIST should appear in the output_descriptor	unknown	unknown	unknown	unknown
